Profile

Driven Informatics Engineering student with a proven track record of translating system requirements into robust web and mobile applications. Proficient in TypeScript (Next.js), PHP (Laravel), Python, and Dart (Flutter). Recognized for strong team leadership, task organization, and effective collaboration in academic projects. Seeking a Software Developer internship to drive impactful tech solutions, with a strong focus on specializing as a Fullstack Developer.

Education

(D4) Bachelor of Applied Science in Informatics Engineering - Politeknik Negeri Jakarta Sep 2023 – 2027 (Expected)

- GPA: 3.87/4.00
- Relevant Coursework: Web Programming, Framework Programming, Mobile Programming, Database Systems, Artificial Intelligence, Probability and Statistics, Project Management, and Professional Ethics & Law.

Skills

Technical Skills

- Programming Languages: JavaScript (ES6+), TypeScript, PHP, Python, Dart, HTML5, CSS3
- Frameworks & Libraries: Next.js, React, Laravel, CodeIgniter 4, Flutter, Tailwind CSS
- Databases & Storage: PostgreSQL, MySQL, SQLite, Oracle DBMS, Firebase Realtime Database
- Tools & Technologies: Git/GitHub, Figma, Jira, Notion, MS Office
- Development Environments: Visual Studio Code (VS Code)

Professional Skills

- Project Leadership: Experienced in leading dev teams, organizing tasks, and delivering projects on time.
- Team Collaboration: Strong communicator skilled at working closely with others to build functional apps.
- Time Management: Proven ability to prioritize tasks and meet strict project deadlines efficiently.
- Professional Integrity: Highly disciplined, detail-oriented, and committed to ethical tech practices.

Work & Organizational Experience

KEMENDIKDASMEN – Data Verifier Sept 2025 - June 2026

- Verified the delivery and technical specifications of received assets—including interactive front panels, laptops, and internet routers—to ensure hardware compliance and accurate inventory tracking.

EXPECTIK – Academic Division Staff Sept 2025 - Dec 2025

- Provided games and missions for freshmen during the EXPECTIK event (ICT Department Orientation), which is part of their graduation requirements.

HIMATIK – ICT Podcast Guest Speaker Aug 2025

- Participated in a podcast held by the ICT Student Association to share impressions and insights as lessons for new students.

SNIV – Model Designer and Developer Jul 2025 - Nov 2025i

- Developed a system to be used for researching and designing models with a multi-model concept in its implementation.

RevoU – Data Analytics Course Participant June 2025

- Attended a RevoU open event about preparation for becoming a Data Analyst.

Politeknik Negeri Jakarta – IISMA Scholarship Representative Jul 2024 – Aug 2024

- Took part in IELTS training and examination funded by the campus as preparation for IISMA.

Computer Student Club – Project Team Lead & Software Developer Jun 2024 – Nov 2024

- Ensured the project development workflow ran smoothly and prevented conflicts on GitHub.
- Participated in weekly club activities with the aim of expanding knowledge related to software development.

Projects

Project KIRA – Predictive Maintenance Platform (2026) [\[GitHub\]](#)

Technologies: Next.js, TypeScript, ExpressJS, FastAPI, PostgreSQL, Altair AI Studio

- Project Management & Analysis: Led end-to-end development from market validation to system architecture, designing a multi-service workflow connecting the web interface with ML engines.
- Data Engineering: Engineered tabular data pipelines using Altair AI Studio and PostgreSQL to extract time-series features from historical asset logs for GBT models.
- Backend Development: Built a dual-engine API using FastAPI for GBT machine learning inference and ExpressJS for core business logic and database management.
- Frontend Development: Developed responsive, typesafe dashboard components with Next.js and TypeScript based on Figma layouts to visualize RUL metrics and asset degradation risks.

Delisa System – Analytical Dashboard Platform (2026) [\[GitHub\]](#)

Technologies: Next.js, React, TypeScript, Laravel, MySQL, Figma

- Fullstack Developer & System Analyst, leading the end-to-end development of dedicated midwife modules from initial architecture to implementation.
- System & Database Designer, architecting relational database schemas and mapping requirements specifically for healthcare and midwife data workflows.
- Frontend Implementation, translating high-fidelity Figma layouts into functional, responsive, and reusable midwife dashboard components using Next.js and TypeScript.
- Backend & Features Integration, developing core business logic, historical data logs, and real-time monitoring systems tailored for midwife analytics and decision-making.

Research – Monitoring System with MultiModel Concept (2025) [\[Attachment\]](#) [\[GitHub\]](#)

Technologies: ReactJS, Python, Flask, MySQL, Figma

- Fullstack Developer, managing the entire project lifecycle from the initial design phase through to final implementation.
- Model Designer, designing models utilizing various heterogeneous dataset sources.
- Frontend Implementation, translating high-fidelity Figma layouts into fully functional application interfaces.
- Database Designer, architecting the relational database schemas for the entire application.
- Core Feature Developer, developing all application functionalities, including the monitoring system, history logs, and analytical results for decision-making.

ShareThem – File Transfer Application via WLAN (2025) [\[GitHub\]](#)

Technologies: Dart, Flutter, Figma, Notion, and supporting packages.

- Backend Developer, leading the development of core file-transfer and networking functionalities.
- Core Feature Developer, designing and implementing end-to-end file transfer concepts, including device discovery, broadcasting, storage transfer, temporary file handling, and final storage execution.
- Storage Integration, creating the file transfer history page by dynamically fetching received data directly from the application's root directory.
- Search Functionality, developing and implementing the search feature on the history page for efficient file tracking.

FinDer – Best Fish Finder Decision Support System (2025) [\[GitHub\]](#)

Technologies: HTML5, CSS, JavaScript, Laravel, MySQL, Notion, Figma, ERDPlus.

- Scrum Master, Backend Developer, & Database Designer for the Decision Support System (DSS/SPK) project using the MOORA method.
- Database Architect, designing database schemas and setting up migrations as well as seeders.
- Admin System Developer, developing the entire administrative management system.
- DSS Logic Developer, building the end-to-end Decision Support System concepts, from user questionnaires to the calculation engine using the MOORA method.
- Calculation & Comparison UI, creating the system pages for calculation results and alternative-based comparisons.
